EDUCATION

National University of Singapore

Aug 2023 – May 2027 (Expected)

Bachelor of Computing (Honors) in Computer Science

- Specialization: Parallel Computing, Algorithms and Theory, Competitive Programming (Top Student **CS3233**)
- Internship availability: May 2026 – Aug 2026

EXPERIENCE

AI Engineer Intern

May 2025 – Aug 2025

Huawei Singapore

- Developed a checkpoint-conversion utility in **Python multiprocessing** to migrate model weights across Tensor-Parallel (TP) and Pipeline-Parallel (PP) shard layouts, reducing conversion time by 70% on average
- Designed and optimized a **decoder-side beam search** module, achieving a 4% improvement in inference accuracy
- Integrated zero-copy, memory-mapped loading of large binary datasets, improving startup time by 25% in discrete-token VLM inference

Software Engineer Intern

May 2024 – Aug 2024

Rakuna Product

- Built candidate interview self-scheduling and auto-reminder email features for the Rakuna Interview Scheduling platform, streamlining interview coordination and reducing delays in the hiring process
- Implemented multi-language support with **Rails I18n** and **I18n-JS**, enabling adoption by French customers and laying the foundation for broader international expansion
- Wrote and maintained **RSpec** tests, improving code quality and ensuring reliable system behavior

PROJECTS

STL reimplementaion ([Source Code](#))

- Re-engineered the **STL library** by rebuilding core **C++** containers (vector, list, map, set) from scratch and extending it with data structures such as **segment tree** and **trie**, enhancing knowledge about STL containers and memory management
- Implemented selected components from **<utility>**, **<memory>** and **<type_traits>**, deepening expertise in C++ template metaprogramming

Dokyu ([dokyu.app](#))

- Developed a backend application using **Django** by engineering backend endpoints for uploading images and videos, email verification, and automated reminders, and by implementing token authentication
- Connected a secure payment system via the **Stripe API**, significantly improving multimedia performance and transaction reliability
- This work earned second prize at 25th [NUS SoC Term Project Showcase](#), awarded for strong project concept and clean functional design

Stellar ([stellar-cs3216a3.com](#))

- Developed backend for a website that analyzes personal statements for Oxbridge and Jardine applications using **generative AI**. This involved implementing a **Django** backend that handled ChatGPT API calls, securing access with token authentication and OAuth, and crafting effective AI prompts to deliver insightful and actionable feedback

The Travel ([travel-github.onrender.com](#))

- Developed backend for a full-featured travel application using **ExpressJS** that includes a real-time chat system with **Socket.io** and backend endpoints for destination search, booking, voting calendar and posting destination suggestions, achieving an advanced level in the [NUS Orbital Program](#)

ACHIEVEMENTS

- Rank 15 in International Collegiate Programming Contest (**ICPC**) – Jakarta Asia Regional (2023) (**C++**)
- Second Prize in International Collegiate Programming Contest (**ICPC**) – Ho Chi Minh Asia Regional (2022) (**C++**)
- Top 1% (Rating 2296) out of over 150,000 active participants of the **Codeforces** competitive programming platform
- Rank 20 in Vietnam International Olympiad Team Selection Test (2022) (**C++**)
- Second Prize (Rank 24/400) in Vietnamese Olympiad in Informatics (2022) (**C++**)

SKILLS

- **Languages:** C++, Python, Java, Typescript, Ruby
- **Frameworks and Libraries:** Pytorch, Tensorflow, Django, Ruby on Rails, Express JS, Socket.io
- **Tools:** C++ MPI, CUDA, PostgreSQL, Linux
